

The 28th JUACEP Seminar

第28回 名古屋大学日米協働教育プログラムセミナー

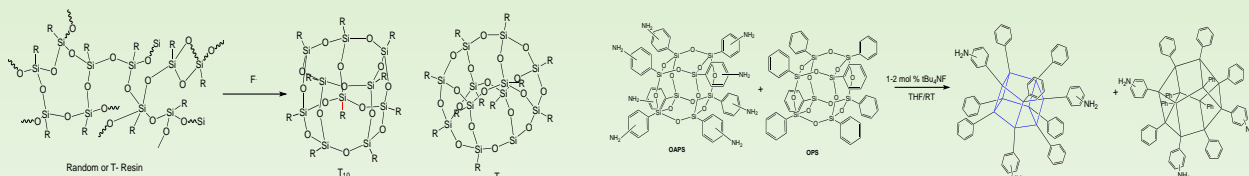

“F- Catalytic Rearrangements of Silsesquioxanes (SQs) and Analogs: New Cage Sizes and Unusual Reactive Properties”

Lecturer: **Professor Richard M. Laine**

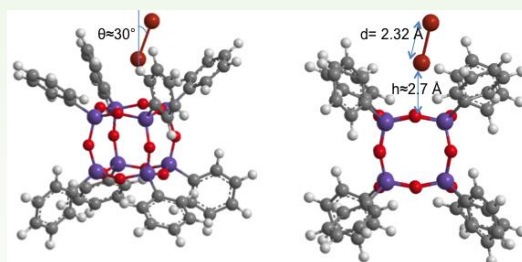

Department of Materials Science and Engineering,
University of Michigan

We have been exploring the use of $t\text{Bu}_4\text{NF}$ as a means to transform either polymeric T resins or single functional group T_8 cages into mixed functional T_{10} and T_{12} SQs as illustrated in the two following reactions.¹⁻³

To this end, we have now developed simple, multigram routes to pure PhT_8 , PhT_{10} and PhT_{12} . The PhT_8 system offers cubic symmetry whereas the PhT_{10} system offers five fold symmetry and is therefore a very unusual molecule. In contrast, the PhT_{12} compound has no symmetry. We have also been able to identify and isolate still larger cages as will be discussed. The various cage sizes allow us to explore the effects of symmetry and size on a wide variety of properties. For example, the PhT_8 cage brominates almost exclusively in the *ortho* position. The PhT_{10} also brominates preferentially in the same position whereas the PhT_{12} is less selective. Modeling studies seem to explain the observed behavior. We have also used Heck catalytic cross coupling to functionalize the *ortho*-bromo derivatives of the cages and explored their photophysical properties.

略歴:

1969年カリフォルニア州立大学化学部卒。1973年南カリフォルニア大学博士号（化学）取得。デラウェア大、UCサンタバーバラ、スタンフォード国際研究所研究員を経て1987年ワシントンテクノロジーセンター研究教授、1990年からミシガン大学物質科学工学部教官。1999年同大教授。Mayaterials 創設者兼CEO、高分子科学工学センター統括者、EXIMOハードコーティング社共同創設者。

Date: May 18 (Mon), 2015 13:00~14:30

Venue: Lecture Rm. 232 (Engg. Bldg. II)

*** 事前参加申込み不要**

Inquiry: JUACEP Office, Eng. (Ext. 2799)
問合せ: 世界展開力強化事業事務局 (内 2799)
